## Robor Precision Tube

Robor Precision Tube manufactures and supplies a comprehensive range of cold rolled and cold drawn precision tube in standard, as well as non-standard sizes.

The precision cold rolled tube range of products features consistent material thickness and mechanical properties. The high quality surface finish is suitable for further chrome and brass plating applications. The improved tolerances facilitate better manipulation characteristics for bending, swaging and other operations requiring tight mandrel fits.

The cold drawn tube products feature improved dimensional tolerances and higher mechanical properties. Products can be annealed for post-drawn manipulation.

The division's ISO 9001 and ISO 14001 accredited manufacturing facilities utilise the latest technology, guaranteeing consistent and superior product quality. In addition, our cold rolled tube and cold drawn precision draw bench operations are ISO/TS 16949 accredited.

## Products at a Glance

- Cold Rolled Round, Square, Rectangular and Oval Tubing
- Special Closed Profiles
- Cold Drawn Precision Tubing

## Value Added Services

- Cutting
- Swaging
- Bending
